

## SET UP INSTRUCTIONS

1

Open the Box, take out the arch, open the arch and spread it on the ground without sharp objects

2

Adjust the position of the arch, pulling the bottom of the arch to a position where the length of the arch is close.

3

Tighten inflation valves and safety valves on all positions

4

Find the inflation valve at the bottom of the arch

5

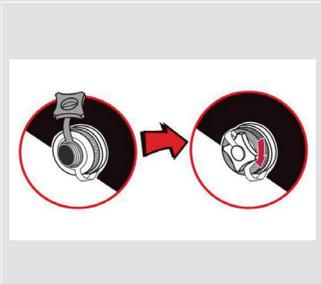

Inflate the arch through the black valve on one side of the arch

6

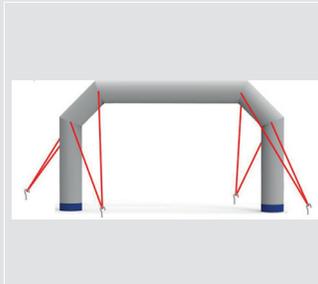

During the inflation process, hold up the middle of arch

7

If you feel that the trachea is full of air or the safety valve starts to leak, stop inflating, unplug the inflation connecting tube, and tighten the inflation valve cover tightly.

8

Security the arch with the ropes and stakes

Finished
