## Step 1: Assemble Frame

Arrange pieces on the floor as shown in the diagram below. Assemble frame by sliding CB9's into corners of the F29, F62 and F63. When locking be sure to turn each cam a little bit and then go back and tighten to the proper tension. Take care to turn locks only half a turn. Lights come adhered to the F29s. Ensure lighting strips on top and bottom are connected.

## Step 2: Attach Light Strips with Wire Management

Once frame is assembled and lighting strips are connected, connect black wire LED-DB-LC-2400 to lighting strips on top and bottom. Run cords with wire management extrusion (WME). Place LED-DB-LC-2400 into plastic wire management strip and insert into F62 extrusion. Next, run LED-DB-CL-DCJ-600 cord through wire hole at the bottom right end of vertical extrusion then connect to lighting strip. Connect to power supply. Important: 9 lighting strips maximum per power supply.
